

Lab4 - GraphX

Amir H. Payberah

payberah@kth.se

1 Introduction

In this lab you will work with GraphX to process graph-based data. The programming environment is the same as the one you used in the lab assignment 2. To do this assignment, extract the given zip file `lab4.zip`, and copy the Notebooks, `figs`, and the `data` folder from `src/notebook` to the folder you have started the Jupyter Notebook. Then, you should be able to see the two files `graphx_social_network.ipynb` and `graphx_songs.ipynb` on your browser on the address `localhost:8888`. The files are self-explanatory that describe what you need to do.

What to deliver: you should complete `graphx_social_network.ipynb` and `graphx_songs.ipynb` and zip them in a single file. Please use the filename format `lab4_groupname.zip`.
